

**FOR IMMEDIATE RELEASE**

## **EBE Technologies – Positive Revenue Growth in 2022**

**East Moline, IL.,** - November 16<sup>th</sup>, 2022 - A record year of revenue growth has been achieved at EBE Technologies. The leader in Robotic Process Automation (RPA) enabled Solutions for the transportation industry has had an increase of **16%** in revenue from new client acquisitions to **29%** from existing clients.

COVID19 has affected a lot of workplace transitions and the ability to hire has declined. Entry level or clerical based positions have been especially challenging. EBE's solutions allows transportation providers to automate repetitive tasks to compensate for the competitive labor market, and gain productivity from knowledge workers.

"This has been an unprecedented year related to talent acquisition. Our clients either cannot find candidates or spend their time coping with the 'Hire, Train and Repeat' turnover issues. The inability to hire creates added work for existing team members which can lead to job dissatisfaction, increase costs given at higher pay grade and performing lower skilled tasks,"

"EBE has (RPA) embedded in our SHIPS imaging and workflow solution for years. We have expanded the capabilities to interact with shippers and intermediaries' websites to perform processing duties, claim assessorial expenses, document uploads, check payment status and provide cross-platform visibility to exceptions."

"We have named our new RPA solution Emily. She performs her assigned tasks 24/7 hours a day and won't be taking any time off. She provides a consistent, reliable job performance and improves job satisfaction of team members by minimizing involvement by performing repetitive tasks."

"This year, EBE has expanded our product portfolio by adding modules to SHIPSMobile Content, including Optical Character Recognition (OCR), brokerage module and implemented SHIPS Applicant Recruiter and Compliance (ARC) system; automating the driver lifecycle processes including Risk Management Information System (RMIS)," Larry Kerr President of EBE Technologies explains.

EBE's managed services Compliance Company; [InfoStream](#) added thousands of drivers into outsource service solutions which helps EBE clients supplement labor. Improving productivity and satisfaction is what we strive for at EBE Technologies. If you want to learn more about EBE and our solutions, please visit our website [here](#).
